Supports and
Insulation

Shunts and Armatures

Blowout Coil (Bare)

Blowout Coil with Support

Bus Bar

MAC offers a full line of electromechanical component parts used in propulsion and electrical systems by locomotive and transit car builders. Components include blowout coils, contact tips, bus bar, contactor components, armatures, connectors and harnesses.

We can design and manufacture parts to meet customized requirements or we can build to drawings and specifications. Our engineers, technicians and machinists can deliver virtually any type of power distribution component for use in locomotive, people mover, light rail vehicle or other systems.
